CRV – New Zealand

2024

BETTER COWS > BETTER LIFE

CRV, leading
in health and efficiency

What does breeding for **health** and **efficiency** look like?

- ▲ Improved udder overall
- ▼ Lower SCC over every lactation (-120,000)

- ▲ 2% improved conception rate
- ▼ Shorter calving interval, higher 6 week in-calf rate

- +64kg more milk solids per cow/lactation
- ▲ Increased lifetime production

- ▲ 92 days higher longevity
- ▲ More days in milk

Performance figures are calculated from the top 25% of cows compared to the lowest 25% of cows from CRV recorded herds.

CRV, leading
in health and efficiency

CRV stands for healthy and efficient cows

The balance between health and efficiency is what makes CRV's breeding programme so unique. A healthy, trouble-free herd that efficiently converts feed into milk, guarantees high lifetime production. Achieving this balance is key to sustainable milk production and creating a better life for cows and farmers.

▲ More solids per kg liveweight

▲ More milk from the same amount of feed

(SAMPLE DATA)

CRV EFFICIENCY 7%

0 dtrs | 0 herds

	Milk (lts)	Protein (kg)	Protein (%)	Fat (kg)	Fat (%)	Fat & Prot (kg)
gBV	333	26	4.1	39	5.2	65
BA	877	27.9	3.7	16.9	4.3	45

CRV HEALTH 4%

	Fertility	BCS	SCS	Hfr CD	Cow CD	Gest Length
gBV	1.8	0.12	0.1	0	0.2	-7.4
BA	-1.8	-0.04	0.04	2.0	1.0	-1.7

Look out for the percentage rating in the catalogue. This percentage represents how much healthier and more efficient the sire is than the population average.

1 - 4% = **Improved performance**

5 - 9% = **Excellent performance**

10%+ = **Superior performance**

Guide to sire information

Shed traits

In all cases positive is better.

Shed temperament

The temperament of the animal in the shed after it has settled into the milking routine.

Grumpy – Lovely

Adaptability to milking

How quickly the animal adapts to the milking routine.

Slowly – Quickly

Milking speed

The length of time it takes for an animal to milk out.

Slow – Fast

Overall opinion

A farmer's overall feeling about the animal.

Poor – Well-liked

Conformation

Rump angle

The angle between the middle of the hip and top of the pin bone. A flat to slightly sloping rump is desired.

High – Sloping

Rump width

The distance between the posterior point of the pin bones in relation to the size of the cow. Good indicator of the width of a cow throughout her body.

Narrow – Wide

Capacity

Strength and depth of chest and body as viewed from the side.

Frail – Capacious

Legs

The angulation of the rear legs.

Straight – Curved

UDDER

Udder support

Strength of the suspensory ligament as viewed from the rear.

Weak – Strong

Front udder

The strength of attachment of the front of the udder to the body wall.

Loose – Strong

Rear udder

The height and width of the rear udder attachment.

Loose – Strong

Udder overall

An overall udder score combining all the udder conformation traits.

Undesirable – Desirable

Stature

Height measured at the animal's shoulder.

Short — Tall

Dairy conformation

An overall conformation score combining all traits except udder traits.

Undesirable — Desirable

Front teat

Placement of front teats.

Wide — Close

Rear teat

Placement of rear teats.

Wide — Close

Teat length

Length of the rear teats from the udder to the tip of the teat.

Short — Long

**Health**

Select animals that will have fewer incidences of health problems throughout their lifetime.

Traits include: fertility, body condition score, somatic cell score, calving difficulty, udder overall and functional survival (expressed as the likely percentage of cows surviving to the next lactation).

**Efficiency**

Select the most efficient animals at converting feed into milk.

Key to bull pages

Look for these icons on the bull pages.

**Sexed**

Sires are available as sexed semen and conventional.

**New**

Sires are either new to the market or have been graduated from an InSire to a proven sire.

Genetic traits

FE facial eczema tolerant.

PP homozygous polled.

Pp heterozygous polled.

LowN lower than average for milk urea nitrogen (MUN).

SG short gestation.

OAD suited to once-a-day milking systems.

**Global bulls**

Semen imported from CRV Netherlands.

Building a healthy and efficient herd for tomorrow

“

I think having companies like CRV involved in your business is really really important, especially in this day and age where everything is evolving, everything is moving.”

“Our production needs to be more efficient but we also need to be more environmentally friendly and I think companies like CRV – they shape what the cow of tomorrow is going to look like, so they’ve got a big part to play.

Mark Carter, farm owner, Taranaki

”

Better cows, better life.

‘We’re passionate about having the cows we want to have in our herd and in our shed.’

Nicki Webster, Dorie, Mid Canterbury.

Good cows produce milk, and great cows do that and much more. Nicki and Peter Webster and their family, with Sharemilkers AJ and Kristy Keller of Dorie, Mid Canterbury are working alongside CRV to craft a herd that is more profitable and a pleasure to milk and manage. We asked Nicki why having better cows leads to a better life with CRV.

BETTER COWS > BETTER LIFE

SireMatch

Get the most out of your herd with breeding support tool, SireMatch.

SireMatch is a report, tailored to your herd and farming situation by CRV's experienced sales consultants. It helps to prevent inbreeding and genetic defects using your cow's pedigree information. It can also indicate the three best bulls to use per cow, based on your preferences.

SireMatch analyses the breed make-up of your herd and can sort the breed information of your cows into separate groups. As a result, you can mate specific bulls to specific breeds of cows in your herd, for example:

- ▶ Your group of Friesian cows to Jersey bulls
- ▶ Your group of Jersey cows to Friesian bulls
- ▶ Your group of Crossbred cows to both Jersey, Friesian and Crossbred bulls

Sexed Semen

Sexed semen, is available from CRV's highest indexing bulls, recognising that farmers want quality replacements from their best cows.

“ *The key reasons I chose sexed semen was for faster genetic gain, easier calving and early replacements.* ”

Ian Hopping, dairy farmer, Canterbury

Reasons to use frozen sexed semen from CRV include:

- ▶ Accelerate your herds genetic gain.
- ▶ Select from CRV's elite sires.
- ▶ Increase value of surplus calves.

CRV brings world-leading sexed genetics technology to New Zealand

The new sexed semen processing facility near Hamilton.

CRV has collaborated with Genus IntelliGen Technologies to bring a new and innovative sexed semen technology to New Zealand, giving you access to high quality sexed semen to accelerate the genetic gain of your herd.

In January 2022 CRV opened its new sexed semen processing facility at its Bellevue farm near Hamilton.

The cutting-edge technology does not subject semen cells to the high pressures, electric currents and shear forces that are used in the traditional sexed semen technology. This reduces stress on the cells as they are processed.

The innovative technology used at Bellevue means CRV can provide farmers with a high-quality sexed product to help you maximise profitability and achieve genetic gains faster and in a more efficient way.

Sexed semen is available from a selection of CRV's best New Zealand and imported bulls, including the company's stars, such as Scotch, Koromiko and Nucleus. The bulls available are the company's highest indexing bulls, recognising that farmers want quality replacements from their best cows.

BREEDING VALUES

New Zealand Animal Evaluation Limited (NZAEL) calculates **Breeding Values (BV)** and **Breeding Worth (BW)** index using information from the sire's relatives (ancestry and progeny) and the sire's own records by comparing it to that of the **Genetic Base Cow**.

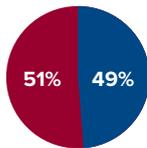

The genetic base cow is the average of a group of well-recorded New Zealand cows (across all breeds) and is updated every five years to reflect genetic progress. BW and BVs are now expressed relative to this genetic base.

BVs are deviations above or below (-) the same genetic base cow (regardless of breed).

NZMI is a CRV index, which breeds towards strong and capacious cows that are efficient producers of high-value milk, with good shed traits, fertility and the udders to keep them profitable and producing in the herd for longer.

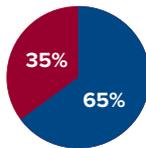

BREEDING VALUES

New Zealand Merit Index - **NZMI**

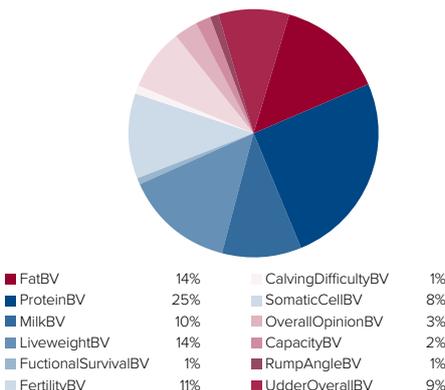

- ▶ A desired gains index with focus on the future.
- ▶ Health traits will become more relevant and therefore have a higher weighting with NZMI.
- ▶ NZMI includes many of the same traits as BW and with the inclusion of key functional traits (Overall Opinion, Capacity, Rump Angle and Calving Difficulty) can be considered BW Plus.
- ▶ NZMI aligns with CRV's global position as a Leader in Health and Efficiency.

Breeding Worth - **BW**

- ▶ Economic index used to rank ability to convert feed into profit.
- ▶ BW has a strong weighting on Efficiency.
- ▶ Traits included in BW are: Protein, Fat, Milk Volume, Liveweight, Fertility, Somatic Cells, Body Condition, Functional Survival and Udder Overall.

BREEDING INDICATORS

NZMI

This is the CRV desired gains index. It aims to breed a productive, long-lasting cow that will typically produce about 450 kgMS a year by balancing production, management and type traits.

BW

Economic index that ranks bulls and cows on their expected ability to breed profitable and efficient replacements.

TOTAL LONGEVITY

The total longevity breeding value is defined as the expected genetic merit of a cow to live for more (or fewer) days of herd life relative to the genetic base cows.

LIVEWEIGHT

Expressed as 5-year-old mature liveweight in kilograms. Breeding values for liveweight are estimated using information that comes from 'traits other than production' (TOP) weight scores of 2-year-old heifers, and from scale weight records of cows measured during one or more of their first 6 lactations.

CRV HEALTH %

The CRV index known as CRV Health helps you select animals that will have fewer incidences of health problems throughout their lifetime.

CRV EFFICIENCY %

The CRV index known as CRV Efficiency helps you easily see the expected efficiency value of an individual sire.

PRODUCTION

MILK (LTS)

This trait measures the expected volume of milk produced by the individual and is of interest due to transport costs associated with moving milk from farms to processing plants around the country. This is why milk is valued negatively in both NZMI and BW.

PROTEIN (KG)

Milk protein is a component of the milk produced by cows and is the most valued output (by processors) from NZ dairy farms. It is also the single most important trait for both NZMI and BW.

FAT

Milk fat is the other component of milk which is paid for by milk processors in NZ and is used in producing lower value commodities such as butter.

MANAGEMENT & HEALTH

FERTILITY

LOW HIGH ▲

Expressed as the percentage of cows pregnant in the 1st 42 days from planned start of mating. A higher fertility breeding value indicates that a bull is expected to have more early pregnant daughters than a bull that has a lower breeding value for fertility.

BODY CONDITION SCORE (BCS)

SHARP COVERED ▲

Body condition score is commonly used as a method to assess body energy reserves.

SOMATIC CELLS SCORE (SCS)

DESIRABLE UNDESIRABLE ▲

Good udder health is typically reflected in low levels of somatic cell counts in milk.

CALVING DIFFICULTY (HFR CD, COW CD)

EASY DIFFICULT ▲

Calving difficulty breeding values are estimated from calving assistance information collected in progeny test herds only or cows that have been TOP inspected as heifers. Sires with negative calving difficulty breeding values will produce progeny that cause less calving difficulties than average.

GESTATION LENGTH

SHORTER LONGER ▲

The number of days shorter or longer than the average gestation period of a dairy cow. Use this strategically to tighten your calving pattern.

FUNCTIONAL SURVIVAL

LESS MORE ▲

Expressed as the likely percentage of cows surviving to the next lactation independent of culling for low production or poor fertility.

SHED TRAITS

ADAPTABILITY TO MILKING

SLOWLY QUICKLY ▲

A description of how soon the animal settled into the milking routine after calving specifically taking into account how many milkings before let down was spontaneous and completed without extra attention.

SHED TEMPERAMENT

GRUMPY LOVELY ▲

Measures the temperament of the animal in the shed while being handled and milked. It is a different trait to adaptability to milking as it is assessed once an animal has settled into the milking routine.

MILKING SPEED

SLOW FAST ▲

The length of time from putting on the cups to when the milk flow stops or cups are taken off. Those cows that have nice silky udders (in contrast to meaty, lumpy udders) tend to be quicker milkers.

OVERALL OPINION

POOR WELL-LIKED ▲

A farmer's overall acceptance of the animal as a herd member.

CONFORMATION

STATURE

SHORT TALL ▲

The height at the shoulder of the animal. This trait is measured across all breeds, resulting in all Jerseys being negative on the breeding values bar graph, Ayrshires being intermediate and Friesians being mainly positive.

CAPACITY

FRAIL CAPACIOUS ▲

Combination of strength and depth of chest and body as viewed from side, rear and front in relation to the physical size of the cow. This is an important trait and reflects an animal's ability to convert feed into milk and withstand the rigours of life.

RUMP ANGLE

HIGH SLOPING ▲

Describes the angle between the centre of the hip and the top of the pin bone. A low score indicates the cow has high pins and a high score indicates low pins. A score of 5-6 describes a flat rump to slightly sloping which is optimal.

FRONT UDDER

LOOSE STRONG ▲

Measures the strength of attachment of the fore udder to the body wall.

REAR UDDER

LOOSE STRONG ▲

Describes the height and width of the rear udder attachment as distinct from udder support.

FRONT TEAT

WIDE CLOSE ▲

The placement of the front teats (at the point of attachment to the udder) relative to the centre of the quarters. A low score indicates wide front teats whilst a high score indicates close front teats.

RUMP WIDTH

NARROW WIDE ▲

Distance between the most posterior point of the pin bones relative to the size of the animal. This trait is a good predictor of the width a cow has throughout her body.

LEGS

STRAIGHT CURVED ▲

Measures the angulation or 'set' of the rear legs and is measured from an imaginary line between thurls and mid-hoof while the cow is walking. A low score indicates a straight leg, whilst a high score indicates a sickled or curved leg set. A score close to 5-6 is considered ideal.

UDDER SUPPORT

WEAK STRONG ▲

This trait describes the strength of the suspensory ligament as viewed from the rear. It also includes the udder depth relative to the hocks. Udder support is a very important trait in determining the number of lactations a cow's udder will survive.

REAR TEAT

WIDE CLOSE ▲

The placement of the rear teats (at the point of attachment to the udder) relative to the centre of the quarters. A low score indicates wide rear teats whilst a high score is close and 5 is central.

TEAT LENGTH

SHORT LONG ▲

Length of the rear teats from the udder to the tip of the teat. A score between 4 and 5 is optimum.

UDDER OVERALL

UNDESIRABLE DESIRABLE ▲

The inspector gives an overall score of the udder including any other udder traits not measured before. Udder overall score can be used to simply compare the overall udder standard of bull daughters.

DAIRY CONFORMATION

UNDESIRABLE DESIRABLE ▲

An overall conformation score combining all traits except udder traits. Dairy conformation is a useful trait for simply comparing animals for dairy type.
